1 Safety warnings

1.1 Warning

Warning: risk of fire / flammable materials

RECOMMENDATIONS:

This appliance is intended to be used in household and similar applications such as staff kitchen areas in shops, offices and other working environments; farm houses and by clients in hotels, motels and other residential type environments; bed and breakfast type environments; catering and similar non-retail applications.

If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.

Do not store explosive substances such as aerosol cans with a flammable propellant in this appliance.

The appliance has to be unplugged after use and before carrying out user maintenance on the appliance.

WARNING: Keep ventilation openings, in the appliance enclosure or in the built-in structure, clear of obstruction.

WARNING: Do not use mechanical devices or other means to accelerate the defrosting process, other than those recommended by the manufacturer.

WARNING: Do not damage the refrigerant circuit.

WARNING: Do not use electrical appliances inside the food storage compartments of the appliance, unless they are of the type recommended by the manufacturer.

WARNING: Please abandon the refrigerator according to local regulators for its use flammable blowing gas and refrigerant.

WARNING: When positioning the appliance, ensure the supply cord is not trapped or damaged.

WARNING: Do not locate multiple portable socket-outlets or portable power supplies at the rear of the appliance.

Do not use extension cords or ungrounded (two prong) adapters.

DANGER: Risk of child entrapment. Before you throw away your old refrigerator or freezer:

-Take off the doors.

-Leave the shelves in place so that children may not easily climb inside.

The refrigerator must be disconnected from the source of electrical supply before attempting the installation of accessory.

Refrigerant and cyclopentane foaming material used for the refrigerator are flammable. Therefore, when the refrigerator is scrapped, it shall be kept away from any fire source and be recovered by a special recovering company with corresponding qualification other than be disposed by combustion, so as to prevent damage to the environment or any other harm.

For EN standard: This appliance can be used by children aged from 8 years and above and persons with reduced physical sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved. Children shall not play with the appliance. Cleaning and user maintenance shall not be made by children without supervision.

For IEC standard: This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.)

Children should be supervised to ensure that they do not play with the appliance.

1.2 Meaning of safety warning symbols

	This is a prohibition symbol. Any non-compliance with instructions marked with this symbol may result in damage to the product or endanger the personal safety of the user.
	This is a warning symbol. It is required to operate in strict observance of instructions marked with this symbol; or otherwise damage to the product or personal injury may be caused.
	This is a cautioning symbol. Instructions marked with this symbol require special caution. Insufficient caution may result in slight or moderate injury, or damage to the product.

This manual contains lots of important safety information which shall be observed by the users.

1.3 Electricity related warnings

- Do not pull the power cord when pulling the power plug of the refrigerator. Please firmly grasp the plug and pull it out from the socket directly.
- To ensure safe use, do not damage the power cord or use the power cord when it is damaged or worn.

- Please use a dedicated power socket and the power socket shall not be shared with other electrical appliances. The power plug should be firmly contacted with the socket or else fires might be caused.
- Please ensure that the grounding electrode of the power socket is equipped with a reliable grounding line.

- Please turn off the valve of the leaking gas and then open the doors and windows in case of leakage of gas and other flammable gases. Do not unplug the refrigerator and other electrical appliances considering that spark may cause a fire.

- Do not use electrical appliances on the top of the appliance, unless they are of the type recommended by the manufacturer.

1.4 Warnings for using

- Do not arbitrarily disassemble or reconstruct the refrigerator, nor damage the refrigerant circuit; maintenance of the appliance must be conducted by a specialist
- Damaged power cord must be replaced by the manufacturer, its maintenance department or related professionals in order to avoid danger.

- The gaps between refrigerator doors and between doors and refrigerator body are small, be noted not to put your hand in these areas to prevent from squeezing the finger. Please be gentle when close the refrigerator door to avoid falling articles.
- Do not pick foods or containers with wet hands in the freezing chamber when the refrigerator is running, especially metal containers in order to avoid frostbite.

- Do not allow any child to get into or climb the refrigerator; otherwise suffocation or falling injury of the child may be caused.

- Do not place heavy objects on the top of the refrigerator considering that objects may fall when close or open the door, and accidental injuries might be caused.
- Please pull out the plug in case of power failure or cleaning. Do not connect the refrigerator to power supply within five minutes to prevent damages to the compressor due to successive starts.

1.5 Warnings for placement

- Do not put flammable, explosive, volatile and highly corrosive items in the refrigerator to prevent damages to the product or fire accidents.
- Do not place flammable items near the refrigerator to avoid fires.

- The refrigerator is intended for household use, such as storage of foods; it shall not be used for other purposes, such as storage of blood, drugs or biological products, etc.

- Do not store beer, beverage or other fluid contained in bottles or enclosed containers in the freezing chamber of the refrigerator; or otherwise the bottles or enclosed containers may crack due to freezing to cause damages.

1.6 Warnings for energy

Warning for energy

- 1) Refrigerating appliances might not operate consistently (possibility of defrosting of contents or temperature becoming too warm in the frozen food compartment) when sited for an extended period of time below the cold end of the range of temperatures for which the refrigerating appliance is designed.
- 2) The fact that effervescent drinks should not be stored in food freezer compartments or cabinets or in low-temperature compartments or cabinets, and that some products such as water ices should not be consumed too cold;
- 3) The need to not exceed the storage time(s) recommended by the food manufacturers for any kind of food and particularly for commercially quick-frozen food in food-freezer and frozen-food storage compartments or cabinets;
- 4) The precautions necessary to prevent an undue rise in the temperature of the frozen food while defrosting the refrigerating appliance, such as wrapping the frozen food in several layers of newspaper.
- 5) The fact that a rise in temperature of the frozen food during manual defrosting, maintenance or cleaning could shorten the storage life.
- 6) The necessity that, for doors or lids fitted with locks and keys, the keys be kept out of the reach of children and not in the vicinity of the refrigerating appliance, in order to prevent children from being locked inside.

1.7 Warnings for disposal

Refrigerant and cyclopentane foaming material used for the refrigerator are flammable. Therefore, when the refrigerator is scrapped, it shall be kept away from any fire source and be recovered by a special recovering company with corresponding qualification other than be disposed by combustion, so as to prevent damage to the environment or any other harm.

When the refrigerator is scrapped, disassemble the doors, and remove gasket of door and shelves; put the doors and shelves in a proper place, so as to prevent trapping of any child.

Correct Disposal of this product :

This marking indicates that this product should not be disposed with other household wastes. To prevent possible harm to the environment or human health from uncontrolled waste disposal, recycle it responsibly to promote the sustainable reuse of material resources. To return your used device, please use the return and collection systems or contact the retailer where the product was purchased. They can take this product for environmental safe recycling.

2 Proper use of refrigerators

2.1 Placement

- Before use, remove all packing materials, including bottom cushions, foam pads and tapes inside of the refrigerator; tear off the protective film on the doors and the refrigerator body.

- Keep away from heat and avoid direct sunlight. Do not place the freezer in moist or watery places to prevent rust or reduction of insulating effect.

- Do not spray or wash the refrigerator; do not put the refrigerator in moist places easy to be splashed with water so as not to affect the electrical insulation properties of the refrigerator.

- The refrigerator is placed in a well-ventilated indoor place; the ground shall be flat, and sturdy (rotate left or right to adjust the wheel for levelling if unstable).

- The top space of the refrigerator shall be greater than 30cm, and the refrigerator should be placed against a wall with a free distance more than 10cm to facilitate heat dissipation.

ⓘ Precautions before installation:

Before installation or adjusting of accessories, it shall be ensured that the refrigerator is disconnected from power.
Precautions shall be taken to prevent fall of the handle from causing any personal injury.

2.2 Leveling feet

Schematic diagram of the leveling feet

(The picture above is only for reference. The actual configuration will depend on the physical product or statement by the distributor)

Adjusting procedures:

- Turn the feet clockwise to raise the refrigerator;
- Turn the feet counterclockwise to lower the refrigerator;
- Adjust the right and left feet based on the procedures above to a horizontal level.

2.3 Door Right-Left Change (Optional)

List of tools to be provided by the user			
	Allen wrench Cross screwdriver		Putty knife thin-blade screwdriver
	5/16" socket and ratchet		Masking tape

1) Please power off this appliance before conduct this operation. Remove all food from door shelves.
Fix the door by tapes.

2) Please dismantle the fitting screws of top cover, and lift the top cover up a little, then disconnect the connection of signal line A and B, take out the sensor, and separate the right hinge cover from top cover; disconnect the connection of signal line E and D, then remove the fitting screws of right hinge and remove the freezer door.

3) Dismantle the fitting screws of middle hinge, remove the middle hinge and sleeve pipe, remove the two hole caps of other side, and uplift the door of refrigerating compartment upwards.

4) Dismantle the lower hinge assembly and levelling foot C, then dismantle the sleeve pipe and hinge shaft, move levelling foot B to right hole, install the hinge shaft and sleeve pipe to the left hole of lower hinge, and then install the lower hinge assembly to the lower left corner of the refrigerator. Finally, install the levelling foot C to the lower right corner of the refrigerator.

After completing the assembly.

5) Dismantle the stoppers and self-locks of both refrigerator door and freezer door, and take out the spare left self-locks from accessory bag, and install the said stoppers and spare left self-locks on left corners of both doors; exchange the installation position of sleeve pipe and hole cap of refrigerator door; dismantle the upper end cover of freezer door, and move the signal line E from right side to left together with the sleeve pipe; take out the spare right decorative cover from accessory bag and install the end cover and right decorative cover, the left decorative cover shall be kept for future use.

6) Put the refrigerator door on lower hinge vertically, install the middle hinge on left side and two hole caps on right side.

7) Move the decorative cover of top cover from left side to right side, take out the left hinge cover from accessory bag, and fix it on left side of top cover; put the freezer door on middle hinge vertically, connect the signal line E to signal line F, connect the signal line A to signal line B, connect the signal line C to signal line D; take out the left upper hinge from accessory bag and fix it on left top side of cabinet, fix the sensor on the original position of top cover; finally to install the top over by fitting screws.

8) After completing the installation

(The picture above is only for reference. The actual configuration will depend on the physical product or statement by the distributor)

2.4 Changing the Light

Any replacement or maintenance of the LED lamps is intended to be made by the manufacturer, its service agent or similar qualified person.

2.5 Starting

- Before initial start, keep the refrigerator still for two hours before connecting it to power supply.

- Before putting any fresh or frozen foods, the refrigerator shall have run for 2-3 hours, or for above 4 hours in summer when the ambient temperature is high.

- Spare enough space for convenient opening of the doors and drawers or statement by the distributor.

2.6 Energy saving tips

- The appliance should be located in the coolest area of the room, away from heat producing appliances or heating ducts, and out of the direct sunlight.
- Let hot foods cool to room temperature before placing in the appliance. Overloading the appliance forces the compressor to run longer. Foods that freeze too slowly may lose quality, or spoil.
- Be sure to wrap foods properly, and wipe containers dry before placing them in the appliance. This cuts down on frost build-up inside the appliance.
- Appliance storage bin should not be lined with aluminum foil, wax paper, or paper toweling. Liners interfere with cold air circulation, making the appliance less efficient.
- Organize and label food to reduce door openings and extended searches. Remove as many items as needed at one time, and close the door as soon as possible.

3 Structure and functions

3.1 Key components

(The picture above is only for reference. The actual configuration will depend on the physical product or statement by the distributor)

Refrigerating chamber

- The Refrigerating Chamber is suitable for storage of a variety of fruits, vegetables, beverages and other food consumed in the short term.
- Cooking foods shall not be put in the refrigerating chamber until cooled to room temperature.
- Foods are recommended to be sealed up before putting into the refrigerator.
- The glass shelves can be adjusted up or down for a reasonable amount of storage space and easy use.
- For better use of the refrigerator, it is recommended to push the slider of manual air damper to right side; if it is not enough cool in refrigerator room, please check this slider and try to push it to right side if not.
- If push the slider of humidity controlling glass shelf to "Vegetables", the humidity inside the crisper will be highest, if push the slider to "Fruit", the humidity inside the crisper will be lowest.

Freezing chamber

- The low temperature freezing chamber may keep food fresh for a long time and it is mainly used to store frozen foods and making ice.
- The freezing chamber is suitable for storage of meat, fish, rice balls and other foods not to be consumed in short term.
- Chunks of meat are preferably to be divided into small pieces for easy access. Please be noted food shall be consumed within the shelf time.

3.2 Functions

(The picture above is only for reference. The actual configuration will depend on the physical product or statement by the distributor)

1)Key

A. Temperature setting button of refrigerator compartment

2)Display screen

- ①setting 1: 8℃
- ②setting 2: 6℃
- ③setting 3: 4℃
- ④setting 4: 2℃

3)Display

when electrify the refrigerator for first time, the display screen shines fully for 3 seconds, and then the refrigerator runs according to setting 3. In case of a failure, the corresponding LED blinks. In case of no failures, it shows the temperature setting of refrigerator.

Fault Code	Fault Description
Indicator setting 1 and setting 2	Refrigerator temperature sensor
Indicator setting 1 and setting 3	Freezer defrost sensor
Indicator setting 1 and setting 4	Ambient temperature sensor

4)Temperature setting

Each time the temperature setting button A is pressed once, the temperature setting changes one time. After the temperature setting has been completed, the refrigerator will run according to the set value after 15s.

The shift regulation is:

5)Lock/Unlock

When the temperature control panel is in lock state, it needs to long press temperature setting key for 3 seconds for unlocking the panel, all LEDs will blink for 2 seconds when panel is unlocked. When the temperature control panel is in unlock state, if there is no operation on control panel within 15 seconds, it will enter into lock state automatically.

4. Maintenance and care of the refrigerator

4.1 Overall cleaning

- Dusts behind the refrigerator and on the ground shall be timely cleaned to improve the cooling effect and energy saving. The interior of the refrigerator should be cleaned regularly to avoid odor. Soft towels or sponge dipped in water and non-corrosive neutral detergents are suggested for cleaning. The freezer shall be finally cleaned with clean water and dry cloth. Open the door for natural drying before the power is turned on.
- Do not use hard brushes, clean steel balls, wire brushes, abrasives, such as toothpastes, organic solvents (such as alcohol, acetone, banana oil, etc.), boiling water, acid or alkaline items clean refrigerator considering that this may damage the fridge surface and interior.
- Do not rinse with water so as not to affect the electrical insulation properties.

⚠ Please unplug the refrigerator for defrost and cleaning.

4.2 Cleaning the glass shelf

- Remove the drawer on the glass shelf;
- Lift up the front of glass shelf (about 60°), and then pull out;
- Remove the glass shelf and clean as needed;
- The reverse operation is for installation of glass shelf.

4.3 Defrosting

- The refrigerator is made based on the air-cooling principle and thus has automatic defrosting function. Frost formed due to change of season or temperature may also be manually removed by disconnection of the appliance from power supply or by wiping with a dry towel.

4.4 How to take out the humidity controlling glass shelf

Please don't try to take out the humidity controlling glass shelf, if it needs to be removed due to cleaning or other reasons, please follow the steps as shown as below:

- 1) Open the door of refrigerator room, hold the upper right corner of door gasket, pull it outwards smoothly until it is separated from the upper right corner of door liner, then hold the upper side and right side of door gasket and pull the gasket outwards until the gasket is separated from the door;
- 2) Take out the two fruit and vegetable boxes;
- 3) Remove the fixing tape on the backside of humidity controlling shelf, then use hand to push the backside of glass upwards, until the backside is separated from the shelf frame with about 10°, and take out the glass with tremendous care;
- 4) Hold the front edge of humidity controlling shelf and lift up it about 20°, then take out the humidity controlling shelf;

5)The reverse operation is for assembly;

NOTE: for gasket assembly, please press the upper right corner of gasket into the upper right corner of door liner, then press the upper side and right side of gasket into the door liner, finally to press the left side and lower side of gasket into door liner. After completing the assembly, please check whether the assembly is firm or not(try to pull out the gasket gently to check), and make sure the surface of gasket is flat.

4.5 Out of operation

- Power failure: In case of power failure, even if it is in summer, foods inside the appliance can be kept for several hours; during the power failure, the times of door opening shall be reduced, and no more fresh food shall be put into the appliance.
- Long-time nonuse: The appliance shall be unplugged and then cleaned; then the doors are left open to prevent odor.
- Moving: Before the refrigerator is moved, take all objects inside out, fix the glass partitions, vegetable holder, freezing chamber drawers and etc. with tape, and tighten the levelling feet; close the doors and fix them with tape. During moving, the appliance shall not be laid upside down or horizontally, or be vibrated; the inclination during movement shall be no more than 45°.

⚠ The appliance shall run continuously once it is started. Generally, the operation of the appliance shall not be interrupted; otherwise the service life may be impaired.

5 Trouble shooting

You may try to solve the following simple problems by yourself. If them cannot be solved, please contact the after-sales department.

Failed operation	<p>Check whether the appliance is connected to power or whether the plug is in well contact .</p> <p>Check whether the voltage is too low.</p> <p>Check whether there is a power failure or partial circuits have tripped.</p>
Odor	<p>Odorous foods shall be tightly wrapped.</p> <p>Check whether there is any rotten food.</p> <p>Clean the inside of the refrigerator.</p>
Long-time operation of the compressor	<p>Long operation of the refrigerator is normal in summer when the ambient temperature is high.</p> <p>It is not recommended having too much food in the appliance at the same time.</p> <p>Food shall get cool before being put into the appliance.</p> <p>The doors are opened too frequently.</p>
Light fails to get lit	<p>Check whether the refrigerator is connected to power supply and whether the illuminating light is damaged.</p>
Doors cannot be properly closed	<p>The door is stuck by food packages.</p> <p>The refrigerator is tilted.</p>
Loud noise	<p>Check whether the floor is level and whether the refrigerator is placed stably.</p> <p>Check whether accessories are placed at proper locations.</p>
Door seal fails to be tight	<p>Remove foreign matters on the door seal.</p> <p>Heat the door seal and then cool it for restoration (or blow it with an electrical drier or use a hot towel for heating).</p>
Water pan overflows	<p>There is too much food in the chamber or food stored contains too much water,resulting in heavy defrosting.</p> <p>The doors are not closed properly, resulting in frosting due to entry of air and increased water due to defrosting.</p>
Hot housing	<p>Heat dissipation of the built-in condenser via the housing, which is normal.</p> <p>When housing becomes hot due to high ambient temperature and storage of too much food, it is recommended to provide sound ventilation to facilitate heat dissipation.</p>
Surface condensation	<p>Condensation on the exterior surface and door seals of the refrigerator is normal when the ambient humidity is too high. Just wipe the condensate with a clean towel.</p>
Abnormal noise	<p>Buzz: The compressor may produce buzzes during operation, and the buzzes are loud particularly upon start or stop. This is normal.</p> <p>Creak: Refrigerant flowing inside of the appliance may produce creak, which is normal.</p>
